Data Analysis QC Info

Sample ID	RNA Conc. (ng/uL)	RNA 260/280	Decoded Reads	High Quality Reads	UMIs	Reads per UMI	Total Receptor RNA
SD_01_CD8_0127	4.30	1.83	7,519,347	6,679,762	102,111	65.42	2,693

T cell Expression and Unique CDR3 Counts

Index	TRA	TRB	TRD	TRG
Expression %	64.21%	31.15%	4.49%	0.15%
Total Receptor RNA	1272	617	89	3
Unique CDR3 %	52.17%	41.18%	5.88%	0.77%
Total Unique CDR3s	204	161	23	3

T cell Diversity Indexes

All diversity indexes are calculated using the CDR3 peptide count distribution. d50 = % of unique CDR3s that make up the top 50% of the total reads. Note: Diversity indexes are not comparable across chain.

Index	TRA	TRB	TRD	TRG
d50	2.94	4.35	4.35	33.33
Shannon entropy	3.50	3.75	2.04	1.10
Pielou's evenness	0.66	0.74	0.65	1.00
Gini index	0.78	0.68	0.62	0.00
Largest clone %	14.15%	8.27%	35.96%	33.33%

Sample Sequencing and Data Analysis Report

SD_01_CD8_0127

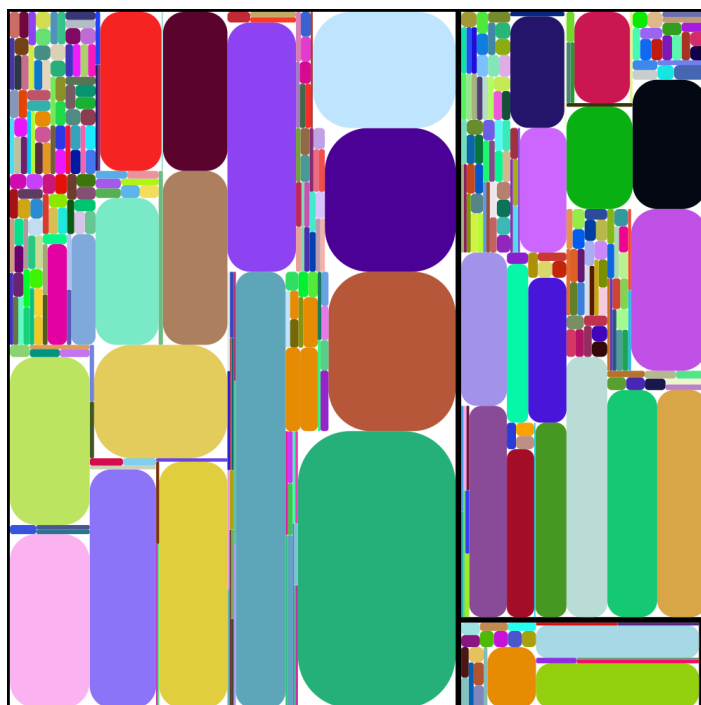

Treemaps

Each rectangle represents a unique clone (CDR3 peptide + V gene + J gene) with its size proportional to its expression.

T cell Treemap

Each outer rectangle represents a chain, with its size representative of its relative expression out of the 4 T cell chains (productive sequences). These treemaps are always read from left to right, then top to bottom in this order: TRA, TRB, TRD, TRG.

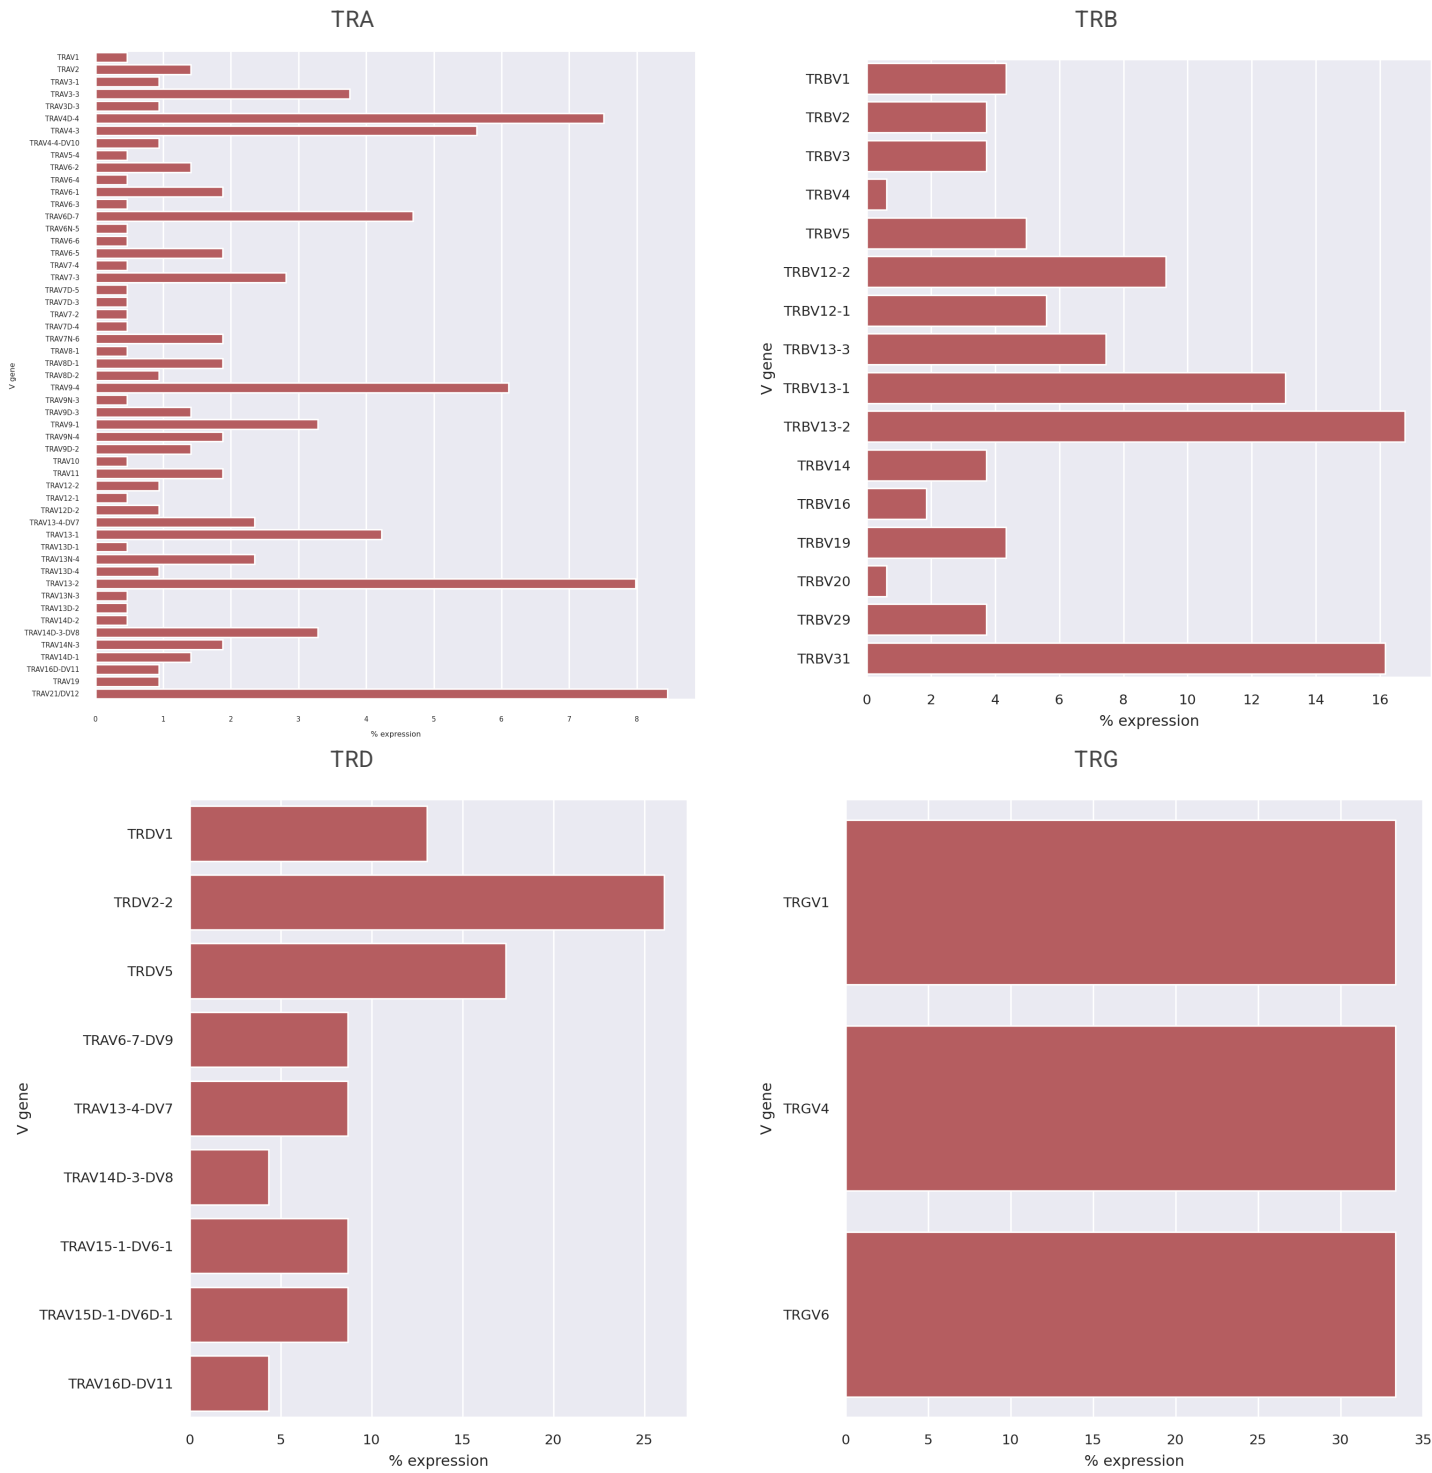

ARP Biotech

Sample Sequencing and Data Analysis Report

SD_01_CD8_0127

T cell V Gene Usage

Percentage expression of each V gene.

ARP Biotech

Sample Sequencing and Data Analysis Report

SD_01_CD8_0127

T cell J Gene Usage

Percentage expression of each J gene.
